

high, although the anti-offset property may be satisfied, the OHP transparency and the low-temperature fixing property cannot be satisfied.

IN THE CLAIMS:

Please replace claims 13 and 15-17 as follows:

13. (Amended) An image forming process comprising a step of forming an electrostatic latent image on a latent image holding member, a step of forming a toner image by developing the electrostatic latent image with a toner, a step of transferring the toner image onto a transfer material to form a transfer image, and a step of fixing the transferred image using a fixing apparatus comprising at least one roller, wherein the toner is the electrostatic latent developing toner described in claim 1, and wherein a surface layer of the at least one roller comprises a releasing resin, and a releasing liquid is not substantially supplied to the surface layer of the at least one roller.

15. (Amended) The image forming process according to claim 13, wherein when an amount of the toner image formed on the transfer material before fixing is 0.50 mg/cm^2 , the toner image has a glossiness (75 degree gloss) of from 40 to 60.

16. (Amended) The image forming process according to claim 13, wherein the fixing apparatus comprises a heat roller and a pressure roller, the heat roller having a surface temperature of from 150 to 180°C .

17. (Amended) The image forming process according to claim 13, wherein the fixing apparatus comprises a heat roller and a pressure roller, the heat roller and the pressure roller each having a peripheral transferring speed of from 70 to 120 mm/second.

REMARKS

Claims 1-20 are pending herein. By the Office Action, claims 7-10, 13, 15-19 are rejected, claim 11 is objected to, claims 1-6 and 12 are allowed, and claims 14 and 20 are withdrawn from consideration. By this Amendment, the specification and claims 13 and
